

Sky Tunnel

Commercial Project

- Site:** Grand Central Bus Terminal, Lucena City, Quezon, PHILIPPINES
- Task:** Reduce energy consumption and increase visual aesthetics.
- Application:** General terminal area running between retail & food outlets.
- Solution:** 10 x 535mm Rigid98 Tube Kits.

Result:

The General terminal area is now well illuminated during the day, reducing energy costs compared to when we were running our electrical lighting. It also looks more inviting for the passengers to visit this area of the terminal. I am very happy with the results achieved.
